PROFESSIONAL SUMMARY

Data operations professional with 4.3+ years of experience at Wipro in mapping and geospatial data management, including road-attribute and speed-limit validation, quality checks, issue identification, and guideline-based review. Experienced in structured quality workflows involving labeler, QC, and meta-QC stages, with a focus on data accuracy, consistency, defect identification, and reporting. Seeking individual-contributor opportunities in Data Quality, QA/QC, Data Validation, Mapping/GIS, Content Quality, and AI Data Operations.

CORE SKILLS

Data Quality & Validation: Attribute verification, rule-based checks, consistency review, issue identification, defect tracking

QA/QC Operations: Quality review, guideline compliance, labeler/QC/meta-QC workflows, error identification and correction feedback

Mapping & Geospatial: Road network data, speed-limit validation, map data editing/review, road categories and conditional rules

Reporting & Productivity: Excel, Google Sheets, structured reporting, documentation, data handling

Technical Foundation: HTML, CSS, JavaScript fundamentals, React.js training, Git and GitHub fundamentals

PROFESSIONAL EXPERIENCE

WIPRO LIMITED | Senior Associate — Mapping & Data Management

June 2019 – September 2023 | 4.3 years

- Reviewed road and speed-limit attributes against defined project guidelines and available evidence to support accurate map data.
- Performed quality checks on mapping edits, identified inconsistencies, and flagged records requiring correction or further review.
- Worked within a structured labeler → QC → meta-QC workflow to verify work quality and adherence to project standards.
- Applied road-category and speed-limit validation rules, including relevant sign-based and policy-based checks.
- Used mapping tools and reporting resources to review issues, document findings, and support operational updates.
- Maintained focus on accuracy, consistency, and quality expectations in a production environment.

SELECTED PORTFOLIO CASE STUDIES

Geospatial Data Quality Audit — planned case study: Demonstrate validation rules for missing road attributes, inconsistent speed-limit values, and invalid records using synthetic data. Add only after completing the analysis.

Data Validation Tracker — planned case study: Build an Excel or Google Sheets tracker to flag blanks, duplicates, mismatches, and unresolved defects. Include actual findings after testing.

AI Annotation Quality Review — planned case study: Use sample annotations to categorize label errors, record review decisions, and demonstrate a repeatable feedback workflow. Do not represent as employer/client work.

EDUCATION

MBA — Finance — GBR UG & PG College, Anaparthi

Bachelor of Commerce (B.Com) — Government Autonomous College, Rajahmundry

ADDITIONAL TRAINING

Web development training: foundational exposure to HTML, CSS, JavaScript, React.js, and Git/GitHub. List specific certificates and completion dates only when verified.

Career focus: individual-contributor roles in Data Quality, QA/QC, Data Validation, Mapping/GIS, Content Quality, and AI Data Operations.
